

I would urge you to reject the NAB petition 04-160 for the simple fact that XM is the best thing that has happened to the trucking industry in along time. Not only can we listen to our favorite music anywhere in the country, it is VERY informative to our business. The instant traffic and weather is great because we can turn to one channel, and find out what we are up against before we ever get there. It is kind of hard to search thru the channels to find a local channel while we are in traffic or bad weather. FM radio does not even offer traffic reports on the local stations I listen to anyway.
